

Project Presentation Rubric

46-927, Spring 2021

Note: All presentations will be through Zoom. You should prepare slides and designate one person on your team to share their screen with the slides, so you don't have to switch between different team members sharing screen.

	Excellent	Needs improvement
All team members involved	All team members are part of the presentation (unless prior arrangement is made)	Some team members not present
Length is appropriate	Presentation is 5-8 minutes	Presentation is too long or too short. (Seriously, stay under 8 minutes ; we like your presentations but think about how many there are!)
Motivation concisely stated	Presentation concisely explains what the project is about and why it's interesting for ML/finance	Unclear why the project is related to ML or finance, or what it offers beyond what we already know
Simple explanation of methods (for projects presenting a new ML method)	Gives a high-level overview of the method and how it relates to the methods covered in the course	Method is unclear or not connected to anything in the course
Simple explanation of analysis (for projects applying ML methods to data)	Gives a high-level overview of the analysis conducted and what was learned	Not clear what analysis was done or how it turned out
Graphics clear and easy to view	Graphics presenting the results or illustrating the method are clear and easy to understand	Graphics small, illegible, or confusing
Professionalism of presentation	Presenters appear prepared (one Zoom mistake is allowed)	Presenters disorganized, don't know what's on their slides, or simply read text off the slides
